

VASTRA

Luxury Handcrafted Sarees — Full-Stack E-Commerce Platform

Live Project: <https://aurasaree.netlify.app/>

GitHub: github.com/Ishika-Gaur

Project Overview

VASTRA (deployed as VastraAura) is a full-stack luxury saree e-commerce platform built to bring the elegance of handcrafted Indian sarees online. The project covers the complete e-commerce lifecycle — product browsing, category/collection filtering, and an admin dashboard for managing the product catalog end-to-end.

Tech Stack

Layer	Technologies
Frontend	React, TypeScript, Tailwind CSS
Backend	Node.js, Express
Database	MongoDB Atlas
Hosting	Netlify (frontend)

Key Features

- Live product catalog powered by REST APIs, replacing earlier static product data
- Category, collection, and shop pages with dynamic filtering
- Dedicated admin panel with secure admin login
- Full admin product management — add, edit, and update products including images
- Local image upload system for product photos via custom upload middleware
- MongoDB-backed persistence with MongoDB Atlas

Engineering Challenges Solved

- Fixed a silent crash-and-fallback bug in the product data context that was masking real API errors
 - Resolved a broken /collections route affecting category navigation
 - Debugged a critical MongoDB _id immutability error that was silently blocking product edits
 - Fixed a useMemo dependency bug that caused shop, category, and collection pages to incorrectly show "0 Products Found"
 - Resolved TypeScript interface mismatches between frontend types and backend API responses
 - Refined field-priority logic in the product adapter layer for consistent product data display
